

Website As Tool

Shannel Doshi

Concept: Online Card Sorting

- Card Sorting is a survey tool that helps researchers to understand a subject's perspective.
- I am keen on doing an online card sorting tool where in people can sort cards based on their preferences.
- I can then use that data as a measurement of a survey.
- The theme of this card sorting would be around my thesis project: Mental Health

Inputs

- The inputs for the Online Card Sorting Tool would be:
 1. The subject's name
 2. Their preferences based on the card's text

Outputs

- The outputs for the Online Card Sorting Tool would be:
 1. A tally of data collected for each card.
 2. A “thank you” window, thanking the subject for their input.
